(54) Title: METHOD AND APPARATUS FOR STORING SUBSCRIBER DATA

(57) Abstract: A method of managing subscriber data in a communications network, the method comprising: sending a message associated with a subscriber and including data relating to the identity of said subscriber; routing said message to a first network entity based on identity and routing information stored at a register; subsequent to receiving said message at the first network entity, provisioning a second network entity with subscriber data required by said second network entity to be able to service said subscriber; and updating routing information associated with the subscriber at the register to route subsequent signalling to the second network entity.
